

We Create A Healthy Tomorrow
For Our Children And Their Families

ABOUT US

At **'The Children's Hospital, Mumbai'** we take care of Pediatric patients since 2003. We strive to deliver the best of care to our patients and thus have put together a well qualified team of physicians, surgeons and anesthetists to look after the most critical and complicated surgical cases.

WE EMPHASIZE A TEAM APPROACH TO CARE

We understand that the decision to undergo a surgery is not an easy decision. We have taken every care to ensure patient's safety and comfort, and ensure that the highest standards of care are followed. Our hospital is committed to individual services rendered with the highest of ethical standards and safety. We have a very competent team to look after all the needs of any patient requiring surgery and also a well equipped ICU & NICU to manage critically ill patients.

Introducing 2 Modern Modular Operation Theatres & Fully Functioned NICU & ICU Prepared To Handle Preterm Neonates To Adults

The NICU at the Children's Hospital, Mumbai is a 15 bedded intensive unit built with the latest technology. We take care of the smallest babies giving them the love and nurturing they require to survive in this world. We are present at the births of high risk babies born in maternity homes and strive to provide your child the quickest treatment by transferring them from the maternity home to our hospital with the help of our specially designed transport incubators.

Our ICU is a 11 bedded intensive unit built with the latest technology equipped with ventilators and life monitoring systems. The required treatment based on the individual needs including intensivists, surgeons, chest physicians, neurologists, cardiologists, etc who along with cutting edge technology - ventilator, BiPAP (non-invasive ventilation), multi para monitors strive to give you and your family the best you deserve.

We are equipped with state-of-the-art-technology to keep your babies in the best health possible including:

- Ventilators
- Ventilator with Clieo
- CPAP
- Multipara and Apnea monitors
- Facilities for Blood Exchange
- Facilities for Central line Insertion
- Facilities for Chemotherapy
- Facilities for total Parental Nutrition

Multipara Monitor with AGM

GE anaesthesia Work Station

LED X-Ray Viewer

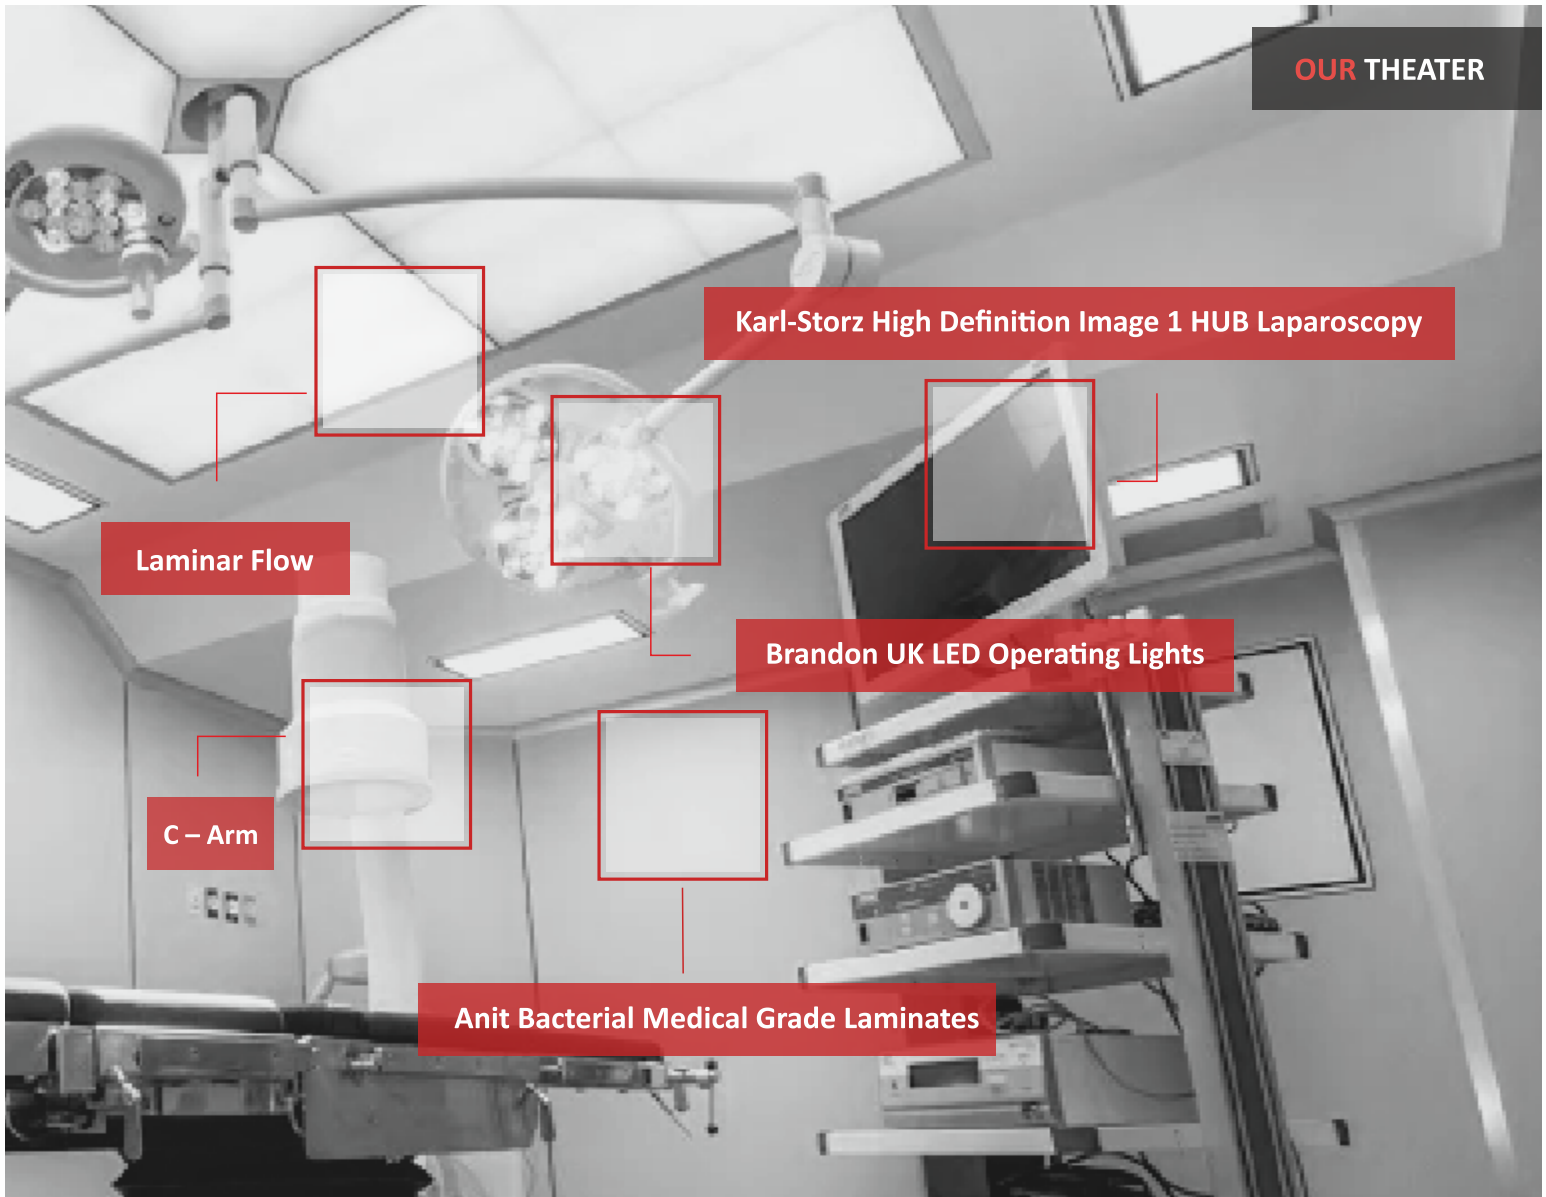

Brandon UK LED Operating Lights

From one of the leading manufacturers of high tech medical lighting ensures shadow-less vision with minimal eye strain, giving the surgeons a clear, bright operating field.

GE anaesthesia Work Station

Capable to ventilate preterm neonates as well as adults with the most precise volumes and highest levels of safety. We use sevoflourine, one of the safest inhaled anesthetic agents.

Laminar Flow

Karl-Storz High Definition Image 1 HUB Laparoscopy

Brandon UK LED Operating Lights

C – Arm

Anit Bacterial Medical Grade Laminates

Laminar Flow

Ensures minimal chances of surgical infection and high levels of safety by maintaining a sterile surgical zone.

Karl-Storz High Definition Image 1 HUB Laparoscopy

For minimal invasive surgeries, leading to a faster recovery, minimal scarring and comfortable post-operative stay.

PEDIATRIC SURGERY

The Pediatric Surgery team provides high quality, compassionate care for infants, children, and adolescents that require surgical intervention. Focusing on the child's well-being first, they strive to produce the best outcomes possible.

All Pediatric surgeries are done with the services of pediatric anesthesiologists, thus ensuring that the children are given anesthesia in the safest and most effective way.

- Congenital Diaphragmatic Hernia

ELECTIVE PEDIATRIC SURGERY

- Gastroesophageal Reflux Disease (GERD)
- Undescended Testes
- Umbilical Hernia
- Inguinal Hernia
- Hydrocele
- Cholecystectomy
- Choledochal cyst
- Biliary atresia
- Thyroglossal Duct Cyst
- Spleen problems
- Hirschsprung's Disease
- Feeding Gastrostomy

EMERGENCY PEDIATRIC SURGERY

- Intussusception
- Perforated Appendicitis
- Thoracoscopic and open Decortication for Empyema
- Pyloric stenosis
- Bowel obstructions

NEUROLOGY

- V.P Shunt
- Decompression following trauma

ONCOLOGY

- Wilms' tumors
- Neuroblastoma
- Liver tumors
- Hepatoblastoma

PEDIATRIC LAPAROSCOPIC, THORACOSCOPIC AND CYSTOSCOPIC SURGERIES

- Adrenalectomy
- Appendicectomy
- Cholecystectomy
- Fundoplication
- Gastrostomy
- Liver Cysts / Abscesses
- GERD
- Herniotomy
- Intestinal procedures
- Diaphragmatic Hernia Repair
- Nephrectomy
- UDT (Undescended testes)
- Empyema Thoracis
- Lung Biopsy and Wedge Resection
- Segmentectomy and Lobectomy
- Posterior Urethral Valves
- Uretrocoel Punctures
